SUMMARY

Network and systems professional with a year and a half of production experience supporting a 2,000+ user higher-education environment. Hands-on across campus switching, perimeter security, and cloud identity administration, with a working background in scripting and automation. Pursuing roles in network engineering and cloud administration.

TECHNICAL SKILLS

Networking: Aruba AOS-CX (6300M, 6100), Cisco Catalyst, VLAN design, trunk/access, RPVST+, OSPF, PoE 802.3af/at, LLDP and LLDP-MED, SNMPv3

Security: FortiGate HA pairs, firewall policy, web and DNS filtering, SSL deep inspection, site-to-site IPsec, SSL VPN, NIST CSF 2.0

Cloud & Identity: Microsoft Entra ID (Global Administrator), Entra Connect, hybrid join, SAML claims, Microsoft Graph, Intune, Autopilot, MFA and FIDO2, conditional access

Systems: Windows 11, Active Directory, Group Policy, LDAPS, AD CS, Linux, Proxmox VE

Automation: PowerShell, Python, Microsoft Graph SDK, PsExec

Wireless: Aruba AP-635 and AP-235, controller-based provisioning

PROFESSIONAL EXPERIENCE

Seward County Community College — Liberal, KS

Junior Help Desk Technician | June 2025 – Present

- Administer Microsoft Entra ID as Global Administrator for 2,000+ users, covering identity lifecycle, group-based licensing, MFA methods, and conditional access policies
- Handled the identity side of a May 2026 security incident: reviewed four days of audit log exports, identified and removed accounts created during the compromise window, and validated vendor service accounts
- Configure and troubleshoot campus access switching across a ~200 VLAN design spanning wireless, voice, camera, and physical access control segments on Aruba AOS-CX and Cisco Catalyst platforms
- Audited a 48-port PoE switch configuration prior to production deployment and delivered a findings report to the CIO identifying OSPF and transit VLAN mismatches, cameras in the default VLAN, and missing syslog and TACACS
- Resolve FortiGate perimeter issues including policy and content filter conflicts, site-to-site IPsec tunnels to Azure, and SSL deep inspection breaking device TLS sessions
- Automated Windows 11 deployment with PowerShell, reducing new-machine preparation to a single menu-driven run and orchestrating feature upgrades across 10+ machines remotely via PsExec
- Documented a remote site's network topology and discovered that a stack documented as three devices was four independent switches in a physical loop held by spanning tree, plus an unaccounted seventh switch
- Proposed separating the Global Administrator role from daily-use accounts and adopting Privileged Identity Management

PROJECTS

LinkCast — Capstone Project, FHSU

Python, FastAPI, MJPEG/WebRTC, vanilla JavaScript | In development, Fall 2026

Browser-based screen distribution that replaces point-to-point hardware dongles with a network service, letting an instructor share a screen to any browser-capable classroom display over the campus LAN. Sole developer. Client discovery and the signed memorandum of understanding are complete; MVP targeted for October 2026. Client: Seward County Community College.

Home Lab

Proxmox VE, Docker, LXC, Linux

Virtualized environment running containers and virtual machines for testing network configurations and automation, with secure remote access over SSH and VPN.

EDUCATION

Fort Hays State University — Hays, KS

B.S. Informatics, Information Networking and Telecommunications | Expected December 2026 | GPA 4.0

Seward County Community College — Liberal, KS

A.A.S. Computer Information Systems | 2024 | GPA 3.58

CERTIFICATIONS & LANGUAGES

- Microsoft Office Specialist
- Microsoft MD-102 Endpoint Administrator — in progress
- EC-Council Certified SOC Analyst — in progress, December 2026

Languages: English (Advanced), Russian (Native), Ukrainian (Native)
